

# How do I create SEO friendly URLs?

Article Number: 513 | Rating: Unrated | Last Updated: Thu, Nov 20, 2008 12:00 AM

Search engines handle urls such as these "www.yourdomain.be/article/15/what-is-SEO.html" much better than "www.yourdomain.be/article.php?id=15".

If you have Linux hosting, you can use [mod\\_rewrite](#) for this. Keep in mind though that many CMS systems already have this function built in.
