

Which server package should I choose?

Article Number: 611 | Rating: Unrated | Last Updated: Mon, Jun 11, 2012 11:59 AM

Each company has other needs. Hostbasket can satisfy these needs by offering different types of dedicated servers.

Something for everybody

1. You like to host **large websites** (E-commerce) and you need a many-sided server on which you can **host applications without restrictions**? You may then opt for the [Evolve](#) server. Ideal as web- or mail server for SMEs.
2. Choose the [Value](#) server for the hosting of **hundreds of websites, mailboxes and company-critical applications**. Perfect for web designers and hosting providers.
3. Are you specialized in **CMS, E-commerce or streaming**? The [Perform](#) server is unbeatable for the hosting of company-critical websites or applications that require pure mathematical power.

More than just a server...

A dedicated server at Hostbasket is more than just a server.

1. You receive a **complete package of services** (firewalling, daily backup, 24h monitoring of server and applications, e-mail and SMS alerting ...).
2. You are **in full control** of your server thanks to the [online control panels](#). But you don't have to. Hostbasket can take over the management through the [Managed Services](#) so you can completely focus on your core activities.
3. You are able to **up- or downgrade your server solution at all times** according to your needs, even within your current subscription term.
4. All servers are housed in our **secured [data centre](#)**. This is located in our own offices in Lochristi.

This means that we are able to rapidly intervene in case of problems.
